

**Why the Esporta patented wash process is superior to all other methods:**

✓ ***Process***

- 4 stage wet detergent and disinfectant process cleans equipment by washing away dirt, mud, grass & sweat stains, as well as rust, puck & tape marks.
- Cleans deep into foams and padding to destroy bacteria and fungus at the source, without causing damage to your protective equipment.
- Actually cleans equipment --not just a deodorizer spray or Ozone mist.

✓ ***Product Safety***

- Environmentally safe cleaning process that is not harmful to the environment, your equipment or humans.

✓ ***Effectiveness***

- Published lab results that validate and confirm bacteria kill rates including the Staphylococcus Aureus bacterium with 99.9997% efficacy.
- Eliminates odors caused by bacteria.
- Equipment can be washed in wet or dry condition—does not require that equipment be completely dry.
- Unlike other methods, does not break down rubber and latex in the equipment.

✓ ***Endorsed Cleaning Process***

- Hockey Canada, Joe Thornton, Walter Gretzky, coaches, trainers, equipment managers, athletes and industry leading equipment manufacturers.
