

SPORTS EQUIPMENT CLEANING

Sports equipment cleaning is how Esporta Wash Systems Inc. came to be. There was, and still is, a real need to clean filthy gear, because not only does it smell, but players are getting sick, and in some cases, even dying from it.

Esporta concerns itself with the microscopic threats present in sports equipment. Esporta has analyzed player's equipment and found mold, fungus, ecoli, blood, and Staphylococcus bacteria (the strain that causes MRSA,) growing on the equipment. Once identified, the Esporta R&D team found the most powerful detergents available to destroy and remove these contaminants from the gear. It wasn't enough to spray the equipment with a deodorizer or Ozone mist. Esporta's patented washing process forces detergents and disinfectants deep into the foam and fabrics of the equipment, killing and removing the bacteria and germs that can cause infections. Dirty clothes need to be thoroughly washed, not just sprayed with the latest scent masking product - we all know "Washing Works!"

Bacterial and infectious diseases are becoming more resistant to antibiotics. The Center for Disease Control recognized a major increase in MRSA since the year 2000. This increase resulted in a Health Bulletin release, in August 2003, to all schools and teams in the USA. In December of that same year, an all-star collegiate player died within 2 weeks of contracting MRSA. The CDC recommended all teams routinely wash player's equipment to prevent the spread of these highly contagious bacterial diseases like MRSA.

Today, the Esporta Wash System and chemicals are being used exclusively by sports equipment cleaning operators like **Equipo C** to protect Universities, Colleges, High Schools, Hockey Teams, Lacrosse Teams, Football Teams, and Baseball Teams as well as other Athletic Teams. Simply stated, these Athletic Teams need proof that when their protective gear and uniforms are washed, that they are, indeed, clean.

Dennis Ryan
Head Equipment Manager
Minnesota Vikings

"As the Minnesota Viking's head equipment manager for 28 years, I know the difficult task of maintaining proper player hygiene. Being able to wash equipment quickly and effectively has been a challenge. This machine is the cleaning solution football has been waiting for. It is fast, kills bacteria, and delivers the results needed for proper player hygiene. Esporta is a perfect choice for sports organizations looking to solve their sports equipment cleaning needs."

**Joe Thornton
Boston Bruins Captain and Esporta
Spokesperson**

"Esporta is the only thing that I trust to work for me. I've had troublesome Staph infections in the past, and Esporta is the only method I trust to remove all the bacteria out of my equipment"

**#1 in the world for sports equipment cleaning—hockey,
football, lacrosse, soccer, baseball, boxing, fencing,
motocross. surfina. snowboardina. & others.**

*It's Not Just About The Smell
Play Clean & Stay In The Game*
